

To create a new database:

```
mysql> create database testdb
```

To connect to the database:

```
mysql> use testdb;
```

Note that you can only connect to the database that is your login.

To execute a query, just type it and put ; at the end. Multiple lines are OK.

```
mysql> select * from sailors;
```

To create a trigger, follow the code below. Note that the code changes how end of statement is specified.

```
mysql> delimiter $$
mysql> create trigger audittrigger
-> after insert on a
-> for each row
-> begin
->   insert into audit values('insert',new.a);
-> end
-> $$
```

Query OK, 0 rows affected (0.19 sec)

```
mysql> delimiter ;
```

```
mysql>
```
